

Assignment TERM4
Due date:15/10/2021

Cape Peninsula
University of Technology

PROJECT II

PRT2

Stream Name: Application Development

Course: Project 2

Lecturer: Ayodeji Afolaya

Student Name: Edvalter Jamba

Student Number: 220446571

Student Email: 20446571@mycput.ac.za

Term 4: Individual report

This an individual submission, presented as a formal report, where you must provide information on:

- **What have you learned?**
- **What was your responsibility? Share the successes as well as the disappointments.**
- **Recommendations for improvements**

What have you learned?

In the beginner of this year we had the opportunity to be allocated in group of four members, therefore working in group is one of the hardest thing in the work field that because we meet different people with different background ,culture and other aspects, and to get along with them sometimes is not easy, but things like that happen to us every single day and we must be prepared when our time comes, I believe this was one of the greatest experience I could get during this project, it has been a pleasure to be a part of the group that I was allocated, we worked as a team and today each of us is able and glad to say that we could create an application that can be very helpful, or useful for many students just like us.

Furthermore, I was able to learn to understand more the people around me, and I could see that only trying to understanding the people in your team makes you able to work with them, people has boundaries but the more you get to know them, closer each of you will get and the work is going perfectly fine.

What was your responsibility? Share the successes as well as the disappointments.

I have been allocated to many tasks and thanks to the consultations and some meeting I was able to understand what could be done on my task, but one of the tasks that makes me be proud of my self is the ABOUT US PAGE of our application I had the honour to develop the about us page of our system, and at the same time I learnt more that I knew in Android Studio, I could make a lot in a such short time something that I thought that was impossible.

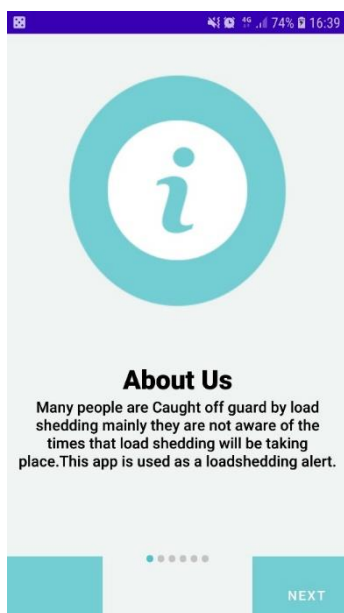

Today I am not only happy with my final task because it makes me feel well, but also because of the good feedback that I could get from the team members about my work.

When work in team you will be disappointed about a lot of things but you cannot let it control you, or you will get lost, the best to do is moving on and try your best.

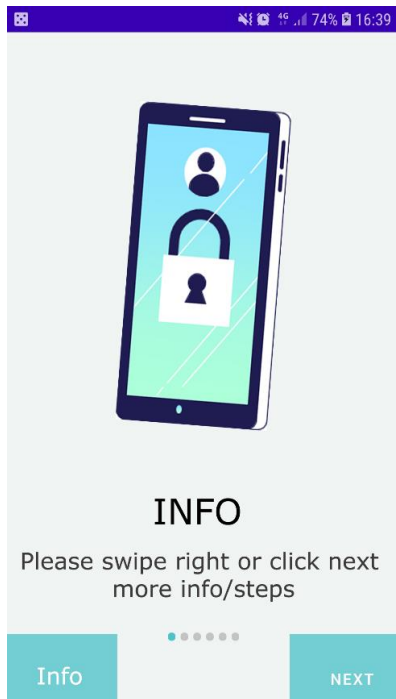

Recommendations for improvements

For the functionality of the system according to our analyse on the system it is and it will be working well for a long time , maybe in the future we will be able to see what else we have to improve, but for now I would like to improve more the about us page, the page that I have been working on, the about us page was the page responsible to show a brief description of the application and the member's details. Although I have done some other functions such as:

Allows the user to swipe left/right, which it makes more interesting to the user and easy to interact. In the first look on the about us page the user will see a brief explanation about the application and if the user swipe left/right will be able to see some information's of the team's members.

Instead of the user get the information such steps of what to do when forget the password from login page, I wanted to make them be able to see it from the about us page as shows in the picture bellow.

When the user click on info he will be able to see info such as: steps for the registration in the system and what and how to act when he forget his/hers password and when he click on the button Us he will be able to see information and a brief explanation about the system and the team members.

The version showing in the picture above was already done but because it did not match well with the design and with some functionalities of the about us page, and some advises of how it would interacting with the system, was not possible to make it available for now, it might be available for the next version

The next version of the about us page besides shows the members information's and a brief description of the Application, will allow to when the user click to go to the about Us page he will be able to see some options , if the user click on next he will find a slide form of the steps of what to do in case the user forget his password, and as well will be able to see information of how to register in the system and others.

In case the user selects information or info, the user will be able to see a brief explanation of what the system does and as well to see the team member and a brief description about each of them.

These are some points that I found interested to improve.

About the lecturer or in general in PRT2 all I can say is that was perfectly fine, and everything was well handled, and I had a really good experience working with the supervisor that was given to us” Mr. Afolayan”.

Thank you.
